The National Breeders Championship

Summary of the Rules and Calculations for figuring the Championships

Introduction:

The concept behind the National Breeders Championship, is to create an opportunity for fanciers across the United States to enter into a competition which would allow comparisons between those breeders.

This year, we are offering two different Championships, the National Breeders Championship and the High Rollers Championship. A fancier may enter one or both championships as they please. Each championship has its own requirements and its own formula for calculating the top breeders in that competition. Your teams must be registered under the same name in all race series results which you submit.

You cannot submit a team for example that was "Coast to Coast Syndicate" in one race series, "Breezy Acres" in another race series and "Hat Trick Loft" in another race series. The names must be recognizable as being from the same breeder or syndicate but minor spelling errors will not disqualify the team results. When entering multiple teams (Team1, Team2, Team3) each team is a separate entry and results from different teams cannot be combined. This puts single team players on an equal footing.

There is no cost to enter into these national level competitions, and it is hoped that over time, sponsors will come forward to offer prizes to the top performers in each of the national competitions.

The National Breeders Championship:

We will be using the UPR of your best bird in the final race of each series. As each race series is completed, the best UPR score for each team will be posted on the website. When all series are completed, we will calculate your best three UPR scores and post the results online.

This calculation is as follows: The position of your bird in the race divided by the total number of birds entered in that race. For example, if your bird was 12th out of 244 birds shipped then its UPR would be 4.92% [$12 / 244 = 0.0492$].

We will then calculate your best three UPR scores and divide by three to arrive at your final score. For example, if your three submitted scores were 4.29%, 6.84% and 3.07% then your final score would be 4.73% $(4.29 + 6.84 + 3.07) / 3 = 4.73$

The High Rollers Championship:

We will be calculating the winners of the High Rollers Team competition based on the best elapse time of your team. As each race series is completed, your elapse times will be posted on the website.

Example:

Elaspse time of your best bird in the Mercedes Classic = 07:38:47

Elaspse time of your best bird in the World Ace Challenge = 07:54:39

Elaspse time of your best bird in the Flamingo International = 08:22:13

Then your Team Elaspse Time is: 23:55:39

The team with the lowest cumulative elapse time is the winner.
